

Optimization of procedures of customs clearance of goods of individuals with the use of the software IRIT

Alim Boziev
The General director of «IRIT» LLC

The identification Regulator of Internet Trade (IRIT) is a software product that allows you to automate data for fast customs clearance of parcels for individuals.

Operational data access current orders and statistics of past periods

Speed

Accuracy

Fully digital data exchange eliminates errors and reduces processing and storage costs

Automation of obtaining and consolidation of logistics data allows the system to be ready for future changes in the requirements of the industry

Universality

Ease

User-friendly interface increases customer satisfaction and reduces labor costs when processing orders

The identification Regulator of Internet Trade (IRIT).

Due to the increased control over the correctness of customs clearance of goods for individuals by the customs authorities, the complexity and regulations and procedures, professional digital data processing is now a key priority of business

The timeliness of providing complete and accurate information about the characteristics of the goods and additional data on the final recipients is a prerequisite for the effective operation of the logistics company

The identification Regulator of Internet Trade (IRIT)

All data on cargo and consignees are consolidated and stored on the company's local servers, which is a prerequisite for legal commercial activity in the territory of the Russian Federation in accordance with the Federal law " On personal data " № 152-FZ

Providing local storage of IRIT data on its own servers allows to optimize the work of foreign contractors, eliminating additional costs and minimizing the risks of future periods

The identification Regulator of Internet Trade (IRIT)

The principle of operation of IRIT

Connection to IRIT is quick and convenient: the partner receives an access code and instructions for connection. If necessary, programmers can help you set up the integration.

The final consignee of the cargo is also authorized once in the IRIT, from that moment the system will automatically collect and store information on all its orders.

Receiving information about the characteristics of the cargo, the details of the shipment on the one hand, and the necessary data about the consignee on the other, IRIT consolidates, processes the data in its own database for the preparation of the necessary documentation to the customs authorities of the Russian Federation.

Example of data display in IRIT

The shipper can see complete information for each shipment, including logistics data and data on specific recipients.

In the personal account of an individual, information about the current orders of the consignee, as well as statistical data for the month and the archive of previous periods is formed. This allows you to quickly track the status of current shipments and eliminate violations of existing duty-free transportation of goods

Together, it can significantly improve the efficiency of interaction of participants in workflows and reduce labor costs for information processing up to 50%.

Key benefits of working with IRIT

- Convenience and speed of connection
- Cost optimization of data collection and analysis
- Automation of business processes and elimination of errors
- Legality, compliance with the legislation of the Russian Federation and fast customs clearance
- Increase the speed of processing orders
- Minimizing the human factor
- The scalability and flexibility of architecture
